with a lined
media

VINYL CUTTER OVERVIEW

Max Media
Thickness:

31.5 mils
(0.8mm)

The Silhouette CAMEO is a machine that electronically cuts various materials. It is similar in size to a home printer and is able to plug into your computer with a USB cable. The cutter uses a small blade to cut certain materials.

STEPS FOR USING THE VINYL CUTTER

Obtain the clear, adhesive sheet to be loaded into the printer. Attach the desired material to be cut onto the adhesive side of the sheet. Open the hood of the cutter and place the edge of the sheet so that it lines up with the two arrows on the left side of the cutter. The material must be face up when being loaded into the cutter. Make sure that the sheet is along the roller so that the sheet and material will be loaded into the cutter. Make sure the cutter is on and press enter to load the cutter. If there are problems loading the sheet, then press enter again to unload the cutter. Close the hood after loading the cutter.

RETRIEVING PICTURES & CUTTING

Retrieve your pictures by logging onto the computer and opening your file(s) on Silhouette Studio. After opening and fitting your file accordingly on the computer, click print. After the cutter is done cutting, lift the hood and press enter to unload the sheet and cut material.
